Subject: Asphalt Specification discussion

Hi Ludomir,

Further to our conversation on Monday I believe you have already received the invite for our meeting next Tuesday. I was hoping we could discuss the following next week:

1. MSCR - AC selection for all road classifications (Local, arterial, collector and freeway) and examples.
2. Asphalt pavement selection for all road classifications (i.e. when a 9.5 is appropriate or when to use a 12.5) with examples... and what changes do we need to do with our current process of pavement design.
3. For Marco: the table related to borderline and reject able pavements and how do deal with them.
4. Asphalt for the Red Hill Valley Parkway resurfacing.... I will get Sarath to come in to discuss this one with us.
5. Miscellaneous

Hopefully this helps. Let me know if you need anything more specific and I will get that too you.

Thanks for your time!

TTYL

Mike
